Scarborough, ON M1H 1H5

12 July, 2007

Hello Mr. Joyce;

Please find enclosed a photo of the Ornithopter during its successful flight last year. I'm sending this in appreciation of the product samples you sent to us in 2001, which have served us very well during the course of our testing. As I had said in our phone conversation back then, I only trust Molyslip for the wing-pivot bushings. It provides the contact film protection and lubricity for these highly-loaded components. Therefore, I thought that you would enjoy seeing a somewhat more unusual application of the product.

In a more mundane fashion, I also use Molyslip as an assembly lube for my vintage motorcycles, as well as a general lubricant for cooling-fan bearings and aquarium pumps. Devices that would only work for a week with conventional greases, work for years with Molyslip.

If you would like to see the ornithopter's flight, it is on our web site at www.ornithopter.ca.

With best regards,

James DeLaurier
