Attention: Ron Wunder, Marketing Manager for
Molyslip – Western Canada

Dear Mr. Wunder,

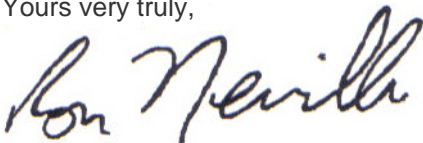

**Re: Molyslip Torture Test
Ft. McMurray, Alberta**

Further to my recent telephone conversation with you, this letter will confirm the following:

- 1) That our company, Performance Autoworks, repairs Trucks, Tractors and Automobiles in Fort McMurray and part of our service work includes repairing and rebuilding engines and transmissions.
- 2) Our business owns a 1989 Dodge Dakota quarter ton pick-up with approximately 300,000 km on it.
- 3) At your suggestion, we recently conducted a **Molyslip Torture Test** on this Vehicle and the results are set out below.
- 4) The oil capacity in the pick-up is 5 litres and on May 11, 2004 we changed the oil in the engine and **added a 300mL can of Molyslip E Oil Supplement** to the engine oil and over the next couple of weeks we drove the pick-up for approximately 100 km.
- 5) On May 27, 2004 we drained the oil from the pick-up and then ran the engine.
- 6) **When we drained the oil, we did not anticipate the engine to run for more than 10 minutes before it would seize up, even though we had added Molyslip E when we did the oil change.**
- 7) ***We were pleasantly surprised to find that after one hour the engine was still running!***

Thank you very much for suggesting the **Molyslip Torture Test**. We will now start to now use Molyslip E on all our motor vehicles. As a result of this test we would **highly recommend the use of Molyslip E Oil Supplement for all types of motor vehicles.**

Yours very truly,

Ron Neville – Owner Manager – Performance Autoworks
