

oil, and the microfilter system captures particles down to 2 microns in size. The filtration efficiency claims to allow vehicles to operate at up to eight times the standard change interval without changing the engine oil, significantly reduces maintenance costs for both individual vehicles and fleets.

Piston catalogue

Mahle Clevite Inc. has released its new Original Light Vehicle Piston catalog (PI-20-09), featuring over 600 new part numbers. In addition, the new catalog uses a brand-new, user-friendly layout for quick and easy reference to diagrams, make and model indexes, and more. The catalog introduces the new part numbering system, translating the previous Clevite numbering system into the new MAHLE Original part numbers. The new catalog also features competitor numbers to contribute to the catalog's functionality.

Behr Hella Service expands coverage

Behr Hella Service, a North American joint venture for thermal management between Behr (vehicle air conditioning and engine cooling) and Hella (lighting technology and electronics) has just added over 40 AC and engine cooling replacement parts to its growing thermal management parts program. The new parts will provide replacements for servicing late-model Audi, BMW, Mercedes-Benz, Volvo, and Volkswagen models.

Copper-based lube

Used by Toyota and Nissan, Copaslip's copper anti-seize is said to provide an insulating layer between metal surfaces, preventing seizure of threaded connections or sliding parts, and aiding in brake jobs. The product claims not to harden or soften, and stay effective to 2000 degrees F.

Weight gauge

Mohawk's weight gauge is an optional upgrade for all Mohawk two-post lifts from 7,000 to 30,000 lb. capacities. Knowing the actual weight of the vehicle assists in selling better brakes, heavier duty brakes, or tires with higher load ratings, as customers can be shown the actual vehicle weight to justify higher dollar parts installations. This also verifies that the lift is not being overloaded.
